2.11 Report

2.11.1 Introduction

X mode is used to read (i.e. print and display) sales data. There are variety of reports that you can generate from X mode. Each of these reports is kept in two separate counters or “books” called X1 and X2. The X1 and X2 reports allow you to print reports at any time for either of the reporting periods. You can use X1 reports to see current daily totals and X2 reports to see current weekly totals. The time period combination you chose is completely dependent upon how you use Z1 and Z2.

Remember that you can generate as many X reports as you would like because X mode does NOT clear any sales data.

3. SALES OPERATION

3.1 Basic Operation

This chapter explains basic operation of scale, such as how to set zero, tare, call up a PLU and override unit price in CL3000 series. In order to make sales transaction user should access REGISTRATION mode.

■ How to access REGISTRATION MODE: Turn ON the scale.

3.2 Zero

You can use the ZERO key to correct for a deviation from zero as long as there are no PLUs or MISC PLUs called-up. The weight can sometimes drift from zero due to debris on the platter, leaving objects on the platter for excessive periods of time, or other environmental factors. To correct this, remove everything from the platter and press the ZERO key when the stable indicator “▼” is on. Below is a possible zero drifted state that should be corrected by simply pressing the ZERO key.

① EX) Initial weight displayed → 0.002.

② Press “ZERO” key to set initial zero.

3.3 Tare

You can enter tare weights as long as there are no PLUs or MISC PLUs called-up. If you need to temporarily override a PLU's tare weight, you must enter the tare weight first and then call-up that PLU. There are two ways to enter a tare weight and both ways will only work if there is no PLU or MISC PLU called-up.

3.3.1 Manual Tare Entry 1

- ① Enter a tare weight manually by pressing the numeric keys
EX) 150 g

- ② Press "TARE" key.

3.3.2 Weighed Tare Entry

- ① Place the empty container on the platter making sure that the weight is stable
EX) 0.15 kg

② Press “TARE” key.

3.3.3 How to Clear Tare

① Remove the item from the platter

② Press “TARE” key again.

3.3.4 Preset Tare

① Call up a PLU including tare (weight of container).

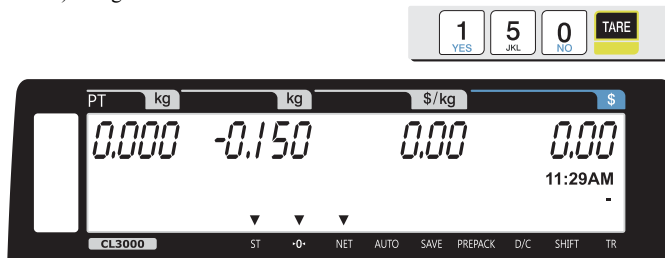

EX) PLU #3's tare =150 g

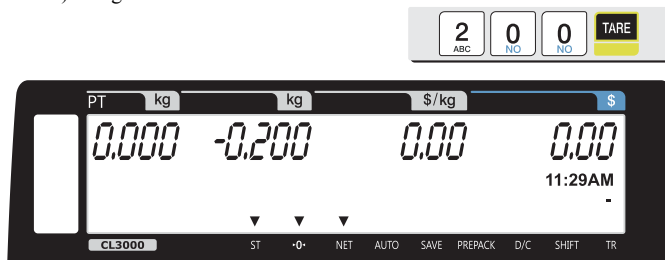

- ② Clear PLU#3, then tare is also automatically cleared.

3.3.5 Successive Tare

- ① Enter tare (weight of container) using numeric keys.
EX) 150 g

- ② Enter the weight of container using numeric keys.
EX) 200 g

- ③ Press “TARE” key after removing item and container from the platter.

Note: Parameter 605 “Accumulation Tare” and parameter 606 “Subtraction Tare” must be set.

3.3.6 Tare Override

- ① Call up a PLU including tare (weight of container).
EX) PLU #4’s tare = 100 g

- ② Place the container (Weight of container must be greater than weight data input) for TARE OVERRIDE.

- ③ Pressing “TARE” key overrides current PLU tare (weight of container) and the weight becomes “0”.

Note: Parameter “603 PLU Tare Override” must be set.

To use OVERRIDE key, you have to set this key in menu 1880 of program mode.
(See chapter 2.10.22)

3.4 Calling Up a PLU

There are two ways to call up a PLU by using numeric key and preset key.

3.4.1 Using Numeric Key

- ① Enter PLU number by using numeric keys and press “PLU” key.
EX) PLU No. 15

Note: Even though you do not press PLU key after entering a PLU number, PLU will be displayed depending on the setting time. It takes time to call up a PLU depending on the setting of parameter, 586 “Indirect PLU Call Time”..

3.4.2 Using Speed Key

To call-up PLU number 79, and you programmed Speed key #5 to be PLU number 79, then you need to press the following key: Speed key #5.

2. The weight deviates by an amount greater than or equal to the Parameter 861 setting (Auto threshold) and the weight stabilizes at a weight greater than zero.
